

The 2009 Import and Export Market for Telephonic or Telegraphic Switching Apparatus in Norway

On the demand side, exporters and strategic planners focusing on telephonic or telegraphic switching apparatus in Norway face a number of questions. Which countries are supplying telephonic or telegraphic switching apparatus to Norway? How important is Norway compared to others in terms of the entire global and regional market? How much do the imports of telephonic or telegraphic switching apparatus vary from one country of origin to another in Norway? On the supply side, Norway also exports telephonic or telegraphic switching apparatus. Which countries receive the most exports from Norway? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for telephonic or telegraphic switching apparatus in Norway. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for telephonic or telegraphic switching apparatus for those countries serving Norway via exports, or supplying from Norway via imports. It does so for the current year based on a variety of key historical indicators and econometric models. In what follows, Chapter 2 begins by summarizing where Norway fits into the world market for imported and exported telephonic or telegraphic switching apparatus. The total level of imports and exports on a worldwide basis, and those for Norway in particular, is estimated using a model which aggregates across over 150 key country markets and projects these to the

current year. From there, each country represents a percent of the world market. This market is served from a number of
