

iBrain: Surviving the Technological Alteration of the Modern Mind

A book about your brain that should make you think twice. Alvin Toffler, New York Times bestselling author of Future Shock. In his book *iBrain: Surviving the Technological Alteration of the Modern Mind*, Gary Small, one of America's leading neuroscientists, explores the remarkable evolution of the human brain caused by today's constant technological presence. Co-written with Gigi Vorgan, Dr. Small's *iBrain* separates the digital natives from the digital immigrants, and suggests that the Internet with its virtually limitless wealth of news and information is radically altering the way young minds are developing and functioning. In this era of Google, Facebook, and YouTube, Gary Small's *iBrain* is an essentially important guide to understanding the astonishing impact of this new brain evolution on our society and our future, as well as a warning of its potential dangers: ADD, social isolation, Internet addiction, etc.
