

ISO 11697:1995, Bases for design of structures -- Loads due to bulk materials

Deals with pressure conditions in hoppers, bunkers, bins and silos constructed using normal structural engineering materials. For the purposes of definition, the term silo is used to represent all forms of storage. All parameters given shall be agreed with the client and written into all contract documents. Design of the silo shall be checked if any of the criteria given are changed. This title may contain less than 24 pages of technical content.
