

ISO 4689-2:2004, Iron ores - Determination of sulfur content - Part 2: Combustion/titration method

ISO 4689-2:2004 specifies a combustion/titration method for the determination of the sulfur content of iron ores. The method is applicable to sulfur contents between 0,002 % (mass fraction) and 0,25 % (mass fraction) in natural iron ores, iron ore concentrates and agglomerates, including sinter products. The results are not affected by the presence of fluoride. This title may contain less than 24 pages of technical content.
