

ISO 21187:2004, Milk - Quantitative determination of bacteriological quality - Guidance for establishing and verifying a conversion relationship ... method results and anchor method results

ISO 21187 IDF 196:2004 gives guidelines for the establishment of a conversion relationship between the results of a routine method and an anchor method, and its verification for the quantitative determination of the bacteriological quality of milk. This title may contain less than 24 pages of technical content.
