

The 2011 Import and Export Market for Dairy Products in the United States

The 2011 Import and Export Market for Dairy Products in the United States

by
Professor Philip M. Parker, Ph.D.
Chaired Professor of Management Science
INSEAD (Singapore and Fontainebleau, France)

On the demand side, exporters and strategic planners focusing on dairy products in the United States face a number of questions. Which countries are supplying dairy products to the United States? How important is the United States compared to others in terms of the entire global and regional market? How much do the imports of dairy products vary from one country of origin to another in the United States? On the supply side, the United States also exports dairy products. Which countries receive the most exports from the United States? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for dairy products in the United States. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for dairy products for those countries serving the United States via exports, or supplying from the United States via imports. It does so for the current year based on a variety of key historical indicators and econometric models. In what follows, Chapter 2 begins by summarizing where the United States fits into the world market for imported and exported dairy products. The total level of imports and exports on a worldwide basis, and those for the United States in particular, is estimated using a model which aggregates across over 150 key country markets and projects these to the current year. From there, each country represents a percent of the world market. This market is served from a number of competitive countries of origin. Based on

both demand- and supply-side dynamics,
market shares by country
