

# ISO 3715-1:2002, Ships and marine technology - Propulsion plants for ships - Part 1: Vocabulary for geometry of propellers

This part of ISO 3715 gives terms and definitions for screw propellers used in the propulsion plants of ships and other vessels (such as mobile offshore drilling units) that are self-propelled or propulsion-assisted. The definitions are valid only for the hydrodynamically effective part of the propeller. No definitions are given for the mechanical construction of the hub. This title may contain less than 24 pages of technical content.
